

Discovery

Hits to Leads
Optimize Binding Affinity

Evaluate

- Drug-target interaction
- Number of binding sites
- Specificity

Isothermal Titration Calorimetry
Measures: Binding constant (K_D), Enthalpy (ΔH), Entropy (ΔS), Gibbs Free Energy (ΔG), Stoichiometry (n)

Candidate Selection

Down Selection of Candidates
Characterize Stability

Evaluate

- Conformational stability
- Multi - domain structures
- High affinity ligand binding

Nano DSC
Measures: Melting temperature (T_m , T_{max}), Enthalpy (ΔH), Heat Capacity (ΔC_p), Entropy (ΔS), Gibbs Free Energy (ΔG)

Formulation

Developability
Prioritize Candidates

Evaluate

NanoDSC

- Conformational stability
- Impact of formulation - pH, salt, excipients, surfactants

Rheology

- Concentration effects
- Route of administration

Nano DSC
Measures: Melting temperature (T_m , T_{max}), Enthalpy (ΔH), Heat Capacity (ΔC_p), Entropy (ΔS), Gibbs Free Energy (ΔG)

Rheology
Measures: Viscosity, Viscoelastic behavior (G' , G''), Yield stress

Delivery

Final Selection
Refine Manufacturing

Evaluate

- Conformational stability
- Processing conditions for lyophilization
- Impact storage

Differential Scanning Calorimetry
Measures: Glass transition temperature (T_g)
